Other While AutoCAD is capable of creating drawings in a variety of media, such as Adobe Illustrator, Autodesk Inventor, Fusion 360, Vectorworks, FreeCAD, and SketchUp, it cannot create drawings directly in those media. Diagrams Drawings may be kept as flattened images, or saved as RTF (rich text format) and DXF (drawing exchange format), or may be converted to image formats such as EPS or SVG. Annotation and annotation layers can be displayed within the drawing and can be made visible or invisible for ease of viewing. Feature control allows external programs to create and modify AutoCAD drawings. Editing While diagrams are drawn in various types of format, drawing elements may be added to a drawing by using commands such as the "Select" command, the "Add" command and the "Extend" command. The "Select" and "Add" commands select components from other drawings in the same drawing file, whereas the "Extend" command extends an object in a drawing to cover a larger area. Drawing objects can be grouped into layers, which are associated with a visible or hidden status. Layers are organized into a layer stack. Diagrams are viewed in a window. The "Drawing View" provides functionality for changing the viewing direction, enlarging and reducing objects, and changing the transparency. Diagrams may be mirrored on the X and Y axis, and objects may be hidden and shown on the diagram. Components and attributes AutoCAD's component management system allows the creation and reuse of components. The system has two main types of components: AutoCAD shapes. Shapes are a well-known type of AutoCAD object and are the building blocks of diagrams. For example, a rectangle may be drawn using the "Rectangle" command. "Entity" objects. In addition to shapes, the "Entity" component allows customizing of the characteristics of a diagram's elements. For example, a parameterized entity is a type of entity in AutoCAD that allows for easy specification of the dimensions of an object. Attributes are the properties of components. Attributes provide information such as name, position, size, color, and visibility, to name a few. Objects may also be categorized based on the type of attributes they contain. These include: Shapes. These are the basic building blocks of all diagrams, and can be created a1d647c40b

What's New In AutoCAD?

Within the print dialogue, the markups are now automatically marked up as active. This means that you don't need to mark them up manually anymore. You can also send automatic responses to the comments received. (video: 1:17 min.) The Move tool: The tool bar has been modified to make it easier to access the tool and change settings. The shift key has been replaced by the more logical option of a toggle key. This means that you don't need to hold down the shift key to switch between tools. The pivot point is now indicated by an arrow in the tool bar. The path widget is now visible and can be accessed via the X shortcut. (video: 1:09 min.) Color pickers, gradients, and colors: The color picker in the color palette has been improved. A gradient fill and line style with its fill and line color can now be created in one step. Complex color schemes can now be created from more than one color. The color wheel has been expanded. You can now create color schemes based on the second, third, and fourth powers of RGB. The palette has been modified to make the color ramp and the color wheel easier to navigate. The gradient palette has been modified to make its appearance more pleasant. The drop-down selector in the color palette has been modified to make it more intuitive and easier to navigate. Support for vector-based colors: You can now use vector-based colors in all the standard palettes in AutoCAD. (video: 0:50 min.) The gradient color function has been updated. (video: 0:48 min.) The Label font dialog has been modified: The units of measurement are now displayed in a currency format. The value and the label are displayed in the same currency format. You can now scroll through the values in the list. The function to create a label from a number is now available for both number or currency data. The type of the label and the font used for the label are now displayed in the dialog. The number of items in the list is displayed in the dialog and in the command bar. Now also every font has a symbolic name
