Subtitle: English Movie Starring: David Morse, Isabella Rossellini, John-Luke Du Prez,.The present invention relates to an improved gas mixture for the fuel rich premixing chamber of a gas turbine engine. More particularly, the invention relates to a gas mixture comprising a mixture of gasoline and liquid propane, in a ratio of 15:1 to 25:1. The gas mixture thus provided is said to be an improvement over prior art fuel rich premixing mixtures. The ratios herein denoted are fuel/air ratios. In gas turbine engines, fuel rich premixing of the fuel and air mixture is performed to provide a flame front which is generally less sensitive to flame hold off. More particularly, the oxygen concentration at the flame front is reduced to a level high enough to ensure a sufficiently high combustion rate without permitting the flame to rise to the region where there is a high concentration of exhaust gasses. It is known to premix fuel and air in the vicinity of the combustion chamber to ensure that, in the event of an ignition source being activated, combustion takes place at the tip of the flame front before the flame front has reached a region where there is a very high concentration of oxgens. Fuel rich premixing as described is typically performed within the first few arc minutes of engine operation. The fuel rich premixing of the air and fuel mixture is performed in a fuel rich premixing chamber, and normally comprises about 15 to 25 times the volume of air required by stoichiometric combustion. Fuel rich premixing ensures that the engine has a lower response to an ignition source which is activated when the engine is under partial power, and can therefore operate in a more stable manner. Liquid hydrocarbons, such as gasoline and liquid propane, are known as useful fuel precursors for gas turbine engines. They have a lower ignition temperature than the gaseous fuels such as natural gas, but they also have the advantage of being stable

Just wondering how I can animate a view which I've hidden programatically. I've read about animation as being built into the OSX framework, and I'd like to do this without using any external libraries. A: Not sure why the accepted answer looks so unfamiliar to me, so I'll leave this here. `UIViewAnimationOptions options = UIViewAnimationOptionRepeat | UIViewAnimationOptionAutoreverse |`

`UIViewAnimationOptionCurveLinear | UIViewAnimationOptionBeginFromCurrentState |`

`UIViewAnimationOptionAllowUserInteraction | UIViewAnimationOptionAllowUserInteractionWhenHighlighted; [UIView animateWithDuration:2.0 delay:0.0 options:options animations:^(view.hidden = YES; } completion:^(BOOL finished) { // do something after animation is finished }];` A: If you use a block for the animation instead of a duration and a delay (example below) it will work no matter if the view is hidden or visible. `[UIView animateWithDuration:0.2f delay:0.0f options:UIViewAnimationOptionAllowUserInteraction|UIViewAnimationOptionBeginFromCurrentState|UIViewAnimationOptionAnimationCurveLinear animations:^(self.myView.hidden = YES; } completion:^(BOOL finished){ f30f4ceada`
