Share our news on: Twitter, Facebook, Google+Q: Is 1 micron accuracy in the 1000-2000 volts range sufficient to make a "slam dunk" guess? I have a hand-held voltmeter that has an accuracy of 1 micron (i.e., about 0.2 volts) over the full range. I would guess that a 1 micron accuracy is in the range of 100-200 volts, but is it sufficient to accurately "guess" voltage? For example: Would it be reasonable to guess that the voltage is in the 20-90 volts range if my voltmeter has an accuracy of 1 micron over the range 1000-2000 volts? I would guess that there would be very good tolerance for the number in this range (e.g., 1 volt would either be between 19 and 91), but the uncertainty is still there. A: In general, this is the type of thing that is typically handled by a single-channel DMM or digital multimeter (DMM), which has thousands of nonlinear digits so can measure accuracy to better than 0.1%, and typically in the range of +/-0.5% to 1%, with secondary measuring over the range you asked about. However, a DMM with wide, nonlinear voltage ranges doesn't typically run at full capacity, so it will very likely have a somewhat reduced accuracy at the upper end of its stated range. This is better than counting "1" and "5" and then guessing at "120" because there is at least a better chance that the meter lied. In any case, the one-micron accuracy is not likely to make a difference in many practical situations. I'd be interested if you quantify what the situation is where you might care about this accuracy. A: Probably not. To "slam dunk" you need numbers that are accurate to

**System Requirements For ColorSurprise AI:**

Perform the following for the most optimal experience. Note that some of these steps may not be necessary, however we feel it would be remiss to release a patch without them! Note that in previous beta test phases we had anticipated that our various systems (which are needed for Patch Testing) would become available closer to the patch release date, however due to various issues, those were unable to be made available until now. For our Beta users on Windows, we recommend at least: Intel(R) Core(TM) i7-7820HQ
