The average consumer purchases it for about \$500. Businesses often need four to five licenses to cover the maximum number of designers in their companies. You may also want the latest version, CS5. Lightroom, introduced in 2005, offers a similar layer-based approach. Its editing is primarily raster based, not vector based. It is more limited than Photoshop and less expensive. If you need to edit and publish, Lightroom can be a good option. A new version of Lightroom, called Lightroom 6, is due out around the time of publication of this book. Adobe Photoshop CS6: The best of the best...almost Photoshop continues to evolve with each release. Sometimes the best way to explain the latest features and capabilities in Photoshop is to show what it's like to work with its "CS" versions. The versions from the first 2 digits signify the year, the next 2 the build, and the last two the overall version. Photoshop CS4 is such a popular version that it's the only version available for download at www.photoshop.com. But it doesn't even include the service Photoshop CC. The latest version is Photoshop CS6. The new interface is sleek, clean, and streamlined, and you can actually see the pixel-based editing rather than a raster thumbnail-style view. Photoshop CS6 is a bit of a different beast than the previous versions. It offers a new 2-dimensional canvas that includes 16.7 million pixels of space (assuming your machine and monitor support the requisite memory). (That's way over what was available in previous versions.) CS6 is stable and works well with a wider range of high-end hardware. It offers greater customization and workflow options. You can even create your own actions. The end result is that it feels and performs like a single application. The layers are still present, but for the first time you can open a multi-document work and start working with it. This interface also gives you the option of opening single files in one canvas. Multiply layers give you the flexibility of being able to apply multiple effects, or to alter the

WASHINGTON — The U.S. House of Representatives has passed the largest package of food stamps benefits in more than a decade, sending legislation to the White House where President Obama is expected to sign it into law. The House voted 329 to 96 late Tuesday to give the \$40 billion program known as SNAP \$4.5 billion in extra funding over the next two years. ADVERTISEMENT The legislation would also make steep cuts to the food stamp program, which has long been a target of conservative lawmakers who say it is a handout to people who don't work. The farm bill will now head to the Senate where Republicans blocked food stamp funding until after the November election. The Senate is expected to pass the measure in December. Opponents say the bill gives away large sums of taxpayer money to people who shouldn't qualify for the assistance. The White House said Obama would sign the legislation. Determination of antibiotics in human serum by high performance liquid chromatography coupled with electrospray ionisation quadrupole time-of-flight mass spectrometry for the monitoring of antibiotic therapy. A simple, selective and sensitive high performance liquid chromatographic method coupled to electrospray ionisation quadrupole time-of-flight mass spectrometry (ESI-Q-TOF-MS) was developed and validated for the determination of 14 antibiotics in human serum. Let's take a look at the steps to use the Clone Stamp. 1. First, select the area on the image that you want to use as a reference. 2. Then select the Clone Stamp tool from the toolbox. 3. Position the tool on the source area. The crosshair at the bottom of the image will tell you where you are on the image, which is useful if you have large areas to copy. 4. Click with the mouse on the area you want to copy, and the tool will copy the pixels from that area to the current source area. You will now have a copy of the reference on the current source area. 5. Select the Copy tool from the toolbox, press Command/Control-C to copy it, then click the reference on the canvas again and paste it by using Command/Control-V. 6. The pixels you copied will have a green, yellow, and white outline. The Paste setting will be selected as green in the Tool Options bar. 7. Next, repeat steps 4-6 to copy the pixels in a different area. You will now have two copies of the same area. 8. Choose a tool from the toolbox and create a brush. 9. Select the Size and Shape tools from the toolbox. 10. Select the Round tool and set the Size to 4px, the Angle to 135 degrees. 11. Use the Paint Bucket tool and erase the dark pixels on the triangles in the image. 12. Choose the Color Picker tool and choose a color to paint it on the triangles. 13. Choose the airbrush tool and add a smooth curve to the bottom of the triangles. 14. Select the Add layer mask tool and click on the image to mask the dark areas. 15. Save the image. 16. Use the Direct Selection tool and paint on the image to select the three areas you would like to clone. 17. Choose the clone Stamp tool from the toolbox. 18. Select the color you wish to replace the current pixels with. 19. Paste the pixels you want to copy. 20. Choose the Eraser tool from the toolbox. 21. Select the light color for the area you are erasing, and erase the dark pixels with the Eraser. 22. Save the image. 23. The next image will be saved with the features you used. Note: the gray area in the image is
