A: This seems to be the question you're asking: Why is the help command listed as a built-in command in the file? When a file is opened, help is parsed and inserted in it. What happens is that your editor's help mechanism parses a certain number of lines, and inserts them before the current cursor position, where the first of these lines is the help command. If the file you're editing is structured like this: do (1) help end then inserting a line reading insert line 1 here would affect this. If the line you're writing in the editor appears in the file normally, that's because the file was opened in read only mode, and the changes were not actually saved. So, if you want to change the filename extension, you first have to save the file. Peptic ulcers in the United Kingdom: trends in activity and mortality. Peptic ulcer is a life-threatening disease with a high morbidity and mortality. Trends in peptic ulcer activity, as indicated by hospital admissions and deaths, have been studied in several countries. The patterns of peptic ulcer activity in the United Kingdom have been analysed using data from hospital admission and death certificates. Over the 20 year period from 1978 to 1997, the number of admissions due to gastroduodenal ulcer declined by 46% from 27,763 to 16,023, and deaths due to ulcer declined by a similar proportion from 38,180 to 17,547. By the turn of the century, gastric ulcer was the largest cause of admissions and deaths due to ulcer in the United Kingdom. The overall age-specific admission rates and mortality rate for gastric ulcer declined more than for duodenal ulcer. The decline in peptic ulcer hospital admissions and deaths, and particularly those related to gastric ulcer, was greatest in younger age groups. There was also a decline in the rate of increase in peptic ulcer mortality, and this slowed in the most recent two decades. The incidence of non-gastric ulcers (i.e. those not involving the stomach and duodenum) increased in recent years. There was no evidence that the rate of increase in peptic ulcer mortality is starting to slow down in the most recent two decades.\*\*\* Copyright (c) 2008-2015 CommonsWare, LLC Licensed under the Apache License, Version
