

How do I view only specific sections of a text document? In a text document, how can I view all the text that is between two given pages (e.g. Section 1 and Section 2) but only see the text contained on those pages, Viewing this way, and then switching between the "page" and the "view" mode as needed is the foremost aid to comprehension in reading documents such as manuals, instruction manuals, or the like. How to plot area graph using python in matplotlib? I have an array of points (x,y) and I'm trying to create a circle that has a nice border/outline and a filled circle.I tried using the code but it doesn't work. How to make users to log in to a simple website using PHP? Hi friends, i am trying to make users to log into their account using PHP. Here is my code. login.php num_rows > 0) { // output data of each row while(\$row = \$result->fetch_assoc()) { echo "1"; } } else { echo "0"; } ?> login.php When i try to login through the above code it sends me to the error page but it does not show the message "Login Successfull" A: For custom error messages in PHP, you need to put the error message in your HTML, and use PHP error reporting, like

Products. Product Overview. Product Offerings. Docker DesktopDocker Hub. This invention relates to the gas turbine technology and more particularly to the air cooled gas turbine components. Currently used gas turbine technology is based on the cooling by means of air only, which, while being effective in keeping the internal temperature of the component below the metal melting point, creates several other serious problems as follows. (a) The process of cooling by means of air has the unfortunate tendency to create higher density holes in the component, which will act as heat source for the hotter temperature air of the gas turbine. (b) With longer cooling paths, high temperature air is allowed to enter the component and oxidize the walls before it is replaced with new air of lower temperature. (c) The air used in the process creates considerable aerodynamic losses due to the swirl loss and boundary layer slip losses. (d) The aerodynamic losses make the cooling air to be higher temperature and the pressure drop is higher. (e) The air used in the process is usually less expensive than the fuel and, if it is not used to any great extent for cooling purposes, will contribute to the undesirable gas discharges, usually referred to as leakages. It is therefore an objective of this invention to use the cooling of the component with a high pressure fuel gas in order to heat and re-circulate the hot gas in the blade cooling air path. Another object of the invention is to provide a gas turbine blade which may be cooled by a cooling gas at high pressure,

the losses being greatly reduced in comparison with the conventional air cooled devices. A still further object of the invention is to provide a gas turbine blade with a combustion chamber to provide the high pressure gas for the cooling and re-circulating process in the blades cooling air path. A still further object of the invention is to provide a process for fabricating 3e33713323
