ITMan Inventory Crack + Free Download

Network Inventory Manager, that can scan and analyze computers in your network to check their hardware and software. It can be used in many ways: - You can enter an IP address and iTMan Inventory For Windows 10 Crack locates it; - You can define a range of IP addresses, iTMan Inventory finds those computers; - You can scan an entire network or enter an IP range. Connections to computers (computers can be connected to a network or a server) are located in the Map tab. New computers appear in the Computers tab. The Computer tab has two panels: list and details. List panel shows the number of computers and their properties (Hardware, Software, and Servers), the version of the software installed and the total disk space. The list panel displays a system-sensitive summary report. The details panel displays information about a single computer (hardware, software, etc.). The full details report can be exported to a HTML document and emailed to a user. iTMan Inventory works in: Windows XP, Vista, 7, 8, and 10; Total of 66335 installations; 6276 users; 2566 computers; iTMan Inventory is a software solution created to help

you scan your local network, identify the connected computers and extract information about their installed hardware and software. A minimalistic design that makes things simple iTMan Inventory displays a user-friendly interface inspired by the Windows Metro look which makes it intuitive and easy to operate. About the GUI layout you can say that it is well structured, placing all the features and functions in plain sight. From the main window you have the means to quickly perform a network scan, view a list with all the found computers and have the application display detailed information about them. Scan an entire network or an IP range iTMan Inventory offers you a number of ways in which you can extract data about a computer. You can either enter its IP address and the application locates it immediately, or define a custom IP range and identify multiple systems. If you don't know the appropriate range, then iTMan Inventory allows you to scan the entire network within a few clicks. It goes without saying that the time you have to wait for the results depends in the scan itself. Scanning an IP range and performing a complete network scan are bound to deliver results at different paces and can take anywhere from a few seconds to a couple of minutes. Generate detailed system reports in a

ITMan Inventory X64
