KeyMacro is an interesting software solution that provides you with the ability to create macros. Macros are small, reusable chunks of code that can be quickly and easily executed. They're the perfect tool for repetitive, time-consuming, or otherwise boring tasks that you'd rather avoid. Macro software allows you to record actions on your computer, then execute them

again and again. You can use this software to quickly clean up your computer, launch your favorite application, resize a window, or navigate through folders. Macros can be used in many ways, including simply repeating a procedure over and over, automating the process of opening a program, or recording a set of keyboard strokes. Macros can be very useful, and they can save you time and give you more control over your

computer. And here is some more info for you: The fact that you've uninstalled a file from your computer, doesn't mean that it was completely removed from your system. Some bits of information and files still remain and it can be quite a difficult to task to completely remove them. Fortunately, iSysCleaner Pro can help you with that. It's a neat software solution that comes with many tools for optimizing your

system. Sleek and simple graphical interface The application installs quickly and it sports a really intuitive and clean graphical interface with a neat layout and many sections at hand. It's available in multiple languages, including English, Dutch, Italian, Portuguese and Spanish. It doesn't come with any customization options, which means that you won't be able to make any changes to the program's interface. Scan your

computer The first thing that you need to do after launching the application is to perform a scan on your computer. The program scans all directories on your system and it displays the start time, elapsed time, objects found, space occupied and more. The scanning time depends on how many files you've saved on your system. It displays the total size of junk files, temporary Windows files, browser files, system junk files,

error reports, user recents and db cache files. You can remove all of these files from your computer and free up space on your hard disk. Adjust some scan options You can set the application to track cookies files on all of your browsers, find temporary files and analyze all fixed drives. It also lets you assign which file extensions would be targeted. You can set
