The Photoshop Skills & Tips series offers an introduction to many of Photoshop's most useful features. You'll see how many of those features can be used by a home or office user, as well as a more "exclusive" image for more experienced users. All tutorials are written with beginners in mind. Photoshop is used to convert from one file format to another, crop images, and enhance the appearance of photographs. The most common file types found in photographs are JPG, GIF, TIFF, and PNG. This tutorial will cover how to convert a Photoshop file from one image type to another. Step 1: From Photoshop, open the photo you wish to convert. Don't close the program or make any other changes to the photo yet. Step 2: Go to File > Save. Step 3: Name the file. Step 4: Save the file as a JPEG. Step 5: After saving the file, close Photoshop and start up the program again. Step 6: Open the file you just saved. You should see an image of the original photo. Step 7: Close the image. Step 8: Now, duplicate the image. Step 9: Open the duplicate image. In the Layers panel, you'll see the two images of the original and the duplicate. Step 10: Go to Image > Canvas Size. On the Canvas Size dialog box, select Full Canvas. Step 11: Click OK. Step 12: Now, select the original image. Step 13: On the right side of the Layers panel, click Image > Edit > Transform > Scale. Step 14: On the Scale dialog box, enter 50% in the box titled "Amount," and click OK. Step 15: The duplicate image will now be 50% smaller than the original. If you wish to change the size, simply change the value in the box labeled "Amount." Step 16: Return to the Layers panel. Right-click on the duplicate layer and choose Create a Smart Object. Step 17: Photoshop will now create a new layer for you and will name it Smart Object. Step 18: In the Layers panel, click OK. Step 19: Now, open the Duplicate Layer dialog box and choose Highlight All. Step 20: Click OK. Step 21: Close the Duplicate Layer dialog box. Go to

Cece Firk Gretchen Firk, better known as Cece Firk, (née Morant)(born December 1, 1939) is an American entomologist specializing in the field of the social behavior of aphids, which she has studied since 1970. She began her studies of aphids while she was a student at Texas A&M University and then as a postdoctoral fellow at Michigan State University. As a graduate student in entomology, she studied the behavior of cicadas, and earned her doctorate under Bridgette G. Stahl in 1966. Her work focuses on the rearing and behavioral studies of the pea aphid (*Acyrtosiphon pisum*). In a study of pea aphid colony interactions, her research indicated that aphids do not induce the formation of sterile males during colony interactions when the colony is in a sexual phase. She has worked with other insects such as cicadas, caddisflies and flies, but pea aphids are her main interests. She is also noted for being interested in ancient thoughts about Aristotle's views on Aphids. Awards H. F. Fleurot Award for the Best First Article - Behavior of Aphids (1972) Aaron M.
