History Autodesk, Inc. was founded by John Walker and Bruce Wyman in 1982. After the original company was destroyed by a fire in 1983, a new company was formed, known today as Autodesk, Inc. Initially, the company produced both hardware and software products. Autodesk, Inc. grew quickly in the late 1980s, with the company having 2000 employees by the end of 1987. A nationwide network of Autodesk sales offices began in 1988. By the end of 1989, Autodesk had revenues of \$108 million and was sold to Videojet Technologies in a \$160 million cash-and-stock deal. During the 1980s, Autodesk became a public company and earned nearly \$100 million in annual profits. The success of the CAD industry was largely due to the fact that companies could save money and time by using AutoCAD. Companies were able to create 3-D models, which allowed sales people to present clients with CAD drawings of their products. This was a very important tool in the sales process. During the early years of Autodesk, the company focused on developing the core AutoCAD technology. In the late 1990s, the company began to diversify its business model and added different software products, such as AutoCAD Electrical. Another important milestone for the company was its release of AutoCAD 95 in 1993. This was a new user interface for the software that aimed at making it easier to use. By the end of 1994, AutoCAD was used by nearly 4 million people in 196 countries. The company was known to operate on an all-or-nothing basis. Once a product was released, it was thought that the company would only release updates if the product was generating high revenue. In 1997, Autodesk acquired the Alias Group, a software company specializing in vector graphics. The Alias Group products were mainly used in the field of desktop publishing, such as page layout and illustration. In 1998, Autodesk released the first version of AutoCAD LT, a lower cost version of AutoCAD. This version was designed for home and small businesses. By the end of 1999, Autodesk had over 3000 employees and was operating in 50 countries. Autodesk is a leading producer of CAD software and one of the most popular software applications in the design industry. The company's products allow engineers and architects to design the products that are needed by the automotive, aerospace, construction, and entertainment industries
