When it comes to the genre-typical first-person shooter, the question that will inevitably pop into your head is: where do I go next? Did shooter fans get as tiring of the run-and-gun shooting frenzy as the rest of the gaming populace? Could we actually get a satisfying, lengthy campaign out of something like Spelunky? Could we create a realistic experience like Doom or The Elder Scrolls? The answer to the question lies in the world of farming, and if you play Shotgun Farmers, you will find out that there are some things a farmer is better at. Rather than shoot his foes in the face with a fully automatic assault rifle, he's got a more creative approach. Instead of shooting out the window of a moving car, he shoots the handle bar of the car, and his seed blows out the window. Instead of his only weapon being a pistol with less ammo than that of an action movie, he can use a huge amount of ammo for his shotgun. A fully automatic shotgun! You'd never be so evil as to need to reload! Despite the mounds of encouragement, however, Shotgun Farmers is a difficult game. It's not in any way easy, but neither are most shooters. It's somewhat hard to understand how you can lose a level. Why would you? So that's the challenge, right? To beat this game? Gun players, rejoice! What The Game Reveals About The FPS Shotgun Farmers turns the genre upside down, from its explosive gameplay to its stunning, open environments. The game uses a simple melee-based character control set that grants the game a unique feeling of freedom. The game lets you move around with normal shooter controls, but it also provides a running, jumping, and vaulting option. It's simple, but it somehow works: see your gun, pull the trigger, and watch as the seeds fly. The system uses a simple intuitive control scheme that works with any input device and in any local environment. One thing that makes the game especially appealing to a player that wants to discover the FPS world is the gameplay itself. I won't lie to you: this game is amazing. The pace is fast, but it is also fast and intelligent enough to let the player go anywhere he or she wants. You can run and jump just about anywhere with the push of a few buttons and a dash of skill. Any patch of level can be reached in the blink of

You even get to tame a furious wild Dragon to ride on!
