****Why Edit Your Photos in Photoshop?*** Most of the people who purchase a digital camera expect that the images it makes will be processed with a little image-editing software before they're ready to use. After all, most do-it-yourself websites provide plenty of image editing and enhancement tutorials, which means that when you go online, you'll usually find images edited with photo editing programs such as Photoshop. The truth is that you should edit your images as well. By choosing which quality setting your camera selects, and the setting that the camera will default to (often the lowest quality setting), you can often lower the file size of your photos. Even if you're using the lowest quality setting (which often just means that your camera doesn't specify a quality setting), you should still go into photo-editing software and edit your photos. **## **Chapter 8 ** ## **Creating Effects**** Photoshop's main menus are loaded with features that enable you to shape, mold, and transform an image into a whole other, and exciting, composition. Most of these effects can also be achieved by other means in Adobe Photoshop, but when you take the time to learn them, you'll come away with a toolbox of useful special effects for your images. In this chapter, you will learn how to: * Curtain Drop * Create an Incredible Ocean Wave * Make the Clouds

Photoshop allows you to edit the normalization of images, making them more consistent. The Normalize Panel contains sliders that allow you to make your photos more even in both light and dark areas. The Threshold Panel is a powerful tool that allows you to edit the brightness, contrast, and color of an image. For example, you can lower the contrast of an image in order to make it greener and less yellow, or you can increase the contrast to make an image appear brighter. In the examples below, I will show you how you can use this panel to create different looks for your images. The Pixelate tool can make an image appear like a shattered glass on black or white paper. You can also use it to create images with a street view. The examples I created used this tool to show the power of its contrast control. The Dodge and Burn tools are useful for correcting certain subjects such as a scene with too much direct light. The Burn tool allows you to lighten, darken, soften, or intensify the colors of an image. The Dodge tool does the opposite and is perfect for correcting images where there are shadows that are too dark. The Pen tool and Brushes are the perfect way to apply texture and color to your images. However, with Photoshop's Brush palette, you can also apply textures, blur, and other effects. The V-Enhance Brush can enhance the contrast of an image. There are several different settings, depending on the type of effect you want. Sometimes you want a specific look, like artistic text or look for images that have a specific color or style. As most of the tools above are also very good for this, I will create examples to show you how you can use different Photoshop tools to achieve a certain look. For example, the Watercolor brush can be used for adding a vintage look. The Brush tool can be used to make sharp and basic brushes. They can be used to paint over an image to give it a desired look. The Watercolor brush is an extremely useful brush, which can be used to apply a natural or vintage look to images. The Painter brush can make a number of different brushes, some which are useful for certain subjects. The Figure 10 brush is perfect for sketching or creating portraits. The Glass Brush is often used for adding a vintage look. Use this brush to apply textures or to create drop shadows. The Pencil brush is a dynamic brush that can be used to create a wide variety of textures

Abu Hamza al-Masri (المصري) Abū Ḥamza al-ʿĀmṣīr) is an Egyptian citizen whose execution was widely publicized after he was captured in Afghanistan in September 2004. He was the founder of al Qaeda. He was previously a professional practicing dentist. Abu Hamza al-Masri is the son of Ṣayyid ʿUmar bin ʿUmar al-Masri, a former field commander for the Egyptian Islamic Jihad who was killed in the Egyptian-Yugoslav war of the 1980s. According to the United States Department of State, Hamza was born in 1977 in Asyut, in Upper Egypt. Al-Masri claimed to be 30 years old, but several reports indicate that he was younger than that. According to Newsweek, he was born in 1976; the US Department of State lists his birth date as July 22, 1978. Al-Masri earned an undergraduate degree in the field of dentistry, graduating in Egypt from Cairo University in 1995. He entered Saudi Arabia and trained in Islamic jurisprudence and religious teaching. He is reported to have been a resident of the Shabwa Region of Yemen, where al Qaeda has had a significant presence for some time. In June 2002, al-Masri was expelled from Yemen, apparently for assistance he gave the Iraqis in their operations against U.S. forces during the early stages of the Iraq War. He then moved on to Peshawar, Pakistan, where he was among a group of al Qaeda operatives who attended a meeting with Osama bin Laden. At the time, he appears to have been the only Egyptian there. He joined al Qaeda, gaining a master's degree in Muslim jurisprudence, and left Peshawar for Afghanistan, where he was welcomed by al Qaeda's leader, Osama bin Laden. Capture and death On September 29, 2004, American Delta Force special forces units raided an al Qaeda training camp, on a farm near the town of Khost, eastern Afghanistan. They captured Abu Hamza al-Masri in the farmhouse where he was eating breakfast and served him with a Miranda warning, and an hour later, a Pakistani tribal chief helped them seal the area as they kept him in custody. During interrogation by Pakistani interrogators, al-Masri
