The IP Switcher enables you to easily switch the network adapter for various communications services and Internet connections. It offers you the option to choose between a fixed or dhcp connection and to define the IP, mask, gateway and DNS servers for the

particular connection.
Additionally, you can
also choose to use an
automatic proxy
configuration. The IP
Switcher can be used on
any Windows PC but
requires administrator
privileges on the
Windows 7 edition.

The good thing is that IP Switcher allows users to quickly load previously created settings and thus change the network

adapter profile in a matter of seconds. The application doesn't slow down the system at all, but it lacks some important features for this kind of software, including a System Tray icon that could allow users jump from one network profile to another with minimum effort. On the other

hand, it runs smoothly on all Windows versions, without the need for administrator privileges on Windows 7 workstations. All in all, IP Switcher is a tool that perfectly serves its purpose, but it still needs some improvements here and there to become one of the top products in this

particular software category. It's friendly with hardware resources however and gets along with all Windows versions out there.Q: How to get all services on a Network SQL Server with.NET or C# I need to get all services on a network (Computer 1) and do some process with them (Install service
