Given its long-standing tradition, Photoshop has for years been the indispensable tool for basic image editing. Although Windows Live Photo Gallery is a new tool, it offers many features that Photoshop does not and many Photoshop users may find their workflow with Live Photo Gallery to be their best choice. Image Editor Pre-OS X 10.4, Photoshop only had a basic image editor. With OS X 10.4, the first major OS X update that ushered in a new interface, Photoshop included a standard "image editor" with many features and the ability to apply different image editing options to images. However, it offered little more than tools for aligning, resizing, and cropping images. With OS X 10.6, Adobe dropped the "image editor" name and included more advanced features in a full-featured Photoshop package. Adobe calls Photoshop's image editor "Photoshop CS5 Extended." It comes bundled with the new Photoshop application as well as the Adobe Lightroom photo-management application, which was previously sold separately. OS X Mavericks includes Photoshop CS6 Extended, which includes many features from CS5. It adds new capabilities to the picture-editing tools and lets you select the type of image you want to work with. Image Save Options To save an image to a new location, click the Photoshop icon in the program's dock and choose File→Save As or press Ctrl+Shift+S. To save the current document, click File→Save or press Ctrl+S. You can create new files in a variety of formats using the Format menu. Choose Photoshop (PSD) or TIFF for the raw image format, 24-bit PSD, PDF, PNG, and TIFF for the editing formats. Photoshop gives you a full array of image editing tools. Adobe gives you a wide choice of image options to save images for use in other programs and as thumbnail images. Selecting the Advanced tab shows more information about the image. The Basic tab includes a color model selector (CMYK vs. RGB) and a color selection tool. If you want to save for web use, select the web browser support option. There's also a Resolution and Size section for adjusting image resolution and file size, respectively. Select the following options to adjust for the various types of uses you plan on making of the saved images. The RGB Color in this image is set to 102. The CMYK Color in

Q: InnerHTML - How to access parent DOM of the HTML-Tag? Hello i have some problems with accessing the parent-Dom of the JQuery-DOM created via innerHtml. I have the following situation: What i try to do is the following: `$(“li a”).click(function(){ var imgs = $(this).parent().parent().parent().children(“p”).find(“img”); //console.log(imgs.attr(“src”)); imgs.attr(“src”, “”); $(this).parent().parent().parent().children(“p”).html(imgs); });` This returns me the wrong value because i am trying to access the image outside of the JQuery-DOM. If someone could help me solve this, that would be appreciated. Thanks in advance! A: You can use `closest(“ul”)`, `closest(“li”)` or `closest(“a”)` to get the parent element directly, but the `imgs` variable is going to be useless. Instead, you can access it through `this.children`, using `clone()` on the element, which is going to make a copy of the current selection and return it as a JQuery object. This way you can easily manipulate the images. `$(“li a”).click(function(){ var imgs = this.children; imgs.attr(“src”, “”); imgs.clone().appendTo($(this).parent().parent().parent()); });` Pine Forest Press The Pine Forest Press is the official editorial office and publishing outlet of the Society for Creative Anachronism, Inc. Q: What's the proper procedure for starting an Insectoid ship? I've started a semi-standard space-sailor Heavy Marine (character specific to me, but here on Earth) in a 3D boardgame called 'Avast!' (among other things). I've been using the rules from the first edition of the game (now second edition), which have the following to say about the starting procedure for a ship: When starting a newly constructed ship, roll: 10 Armor 10 Propulsion Which is fairly unambiguous, though reading the first edition rules text shows that they don't have a line with the exact wording of the current version (since they were changed). So there's clearly something more to be said about this. The rules however seem to be a bit vague about the exact procedure to follow in the case that you have a vessel that has been in service for some time. With just the right number of hits and the right combination of repairs, you could hit levels of accumulating problems and be in danger of sinking quite quickly, and thus have to accept a lower chance of success, with a substantial loss of equipment. The relevant part of the manual is 'After Trials and Tribulations', when it talks about repairing: Example A: A battleship, brigantine or longship sinks after two hits. Before repairs are undertaken, the captain has a 50% chance of repairing their ship and a 10% chance of not repairing at all. Each repair point restored costs 5% of the hull's total hit points. If a vessel is completely sunk, the results of a repair roll are the same as a normal roll of the same number. After a successful repair, the captain must roll a second time. If any of the following occurs, the ship sinks permanently: • The ship receives further damage, with the captain's roll of 1 or 2. • The ship's hull is lost by sinking. • The ship's hull is lost by explosion. • The ship's hull is lost by fire. • The ship's crew is lost. • The vessel sinks at sea or must use shore power. • The ship is stranded. A vessel that survives with all its major equipment can replace its hull at a later time, using the same rules for hull replacement as mentioned under Conditions of Service.
