Developers can use this approach to create their own components to extend AutoCAD functionality, or use the environment to develop applications for AutoCAD. One of the main things that a lot of AutoCAD developers use is ObjectARX, which is a C++ class library used to interface with AutoCAD applications. ObjectARX was developed by the Autodesk Research & Development team for Autodesk Research and Development projects. The fundamental concepts that Autodesk Research and Development uses to build AutoCAD application components are: Autodesk has also created other C++ libraries such as D3D Toolkit to use with the D3D API for applications based on the Windows operating system, the Layer Manager, version 5.0, is used to view and manage drawing and model layers. The main Autodesk programming languages are: AutoLISP, the language of choice for drawing editors, programmable objects, and macros Visual LISP, a modified LISP dialect used for programming the graphical user interface (GUI) and for programming applications (usually called "macros") VBA, the programming language of Microsoft Office the.NET Framework, an open-source, object-oriented class library from Microsoft Corp. for building and deploying applications for the.NET platform ObjectARX is the C++ class library for AutoCAD programming. The AutoLISP library is composed of a macro language interpreter and a macro language compiler. The Visual LISP compiler is based on the Visual Studio project system; it is composed of a Visual LISP IDE environment and project system that uses Visual LISP source code and object code as the file format. The Visual LISP IDE environment is a wizard-based development environment for drawing components and macros. AutoCAD is a family of CAD (Computer-Aided Design) applications. AutoCAD is not a single application but a family of applications that are designed to work together. These products are: AutoCAD is the core product of the AutoCAD family. It is a CAD package, which handles drafting, 2D and 3D modeling, documentation, database management, and numerous other functions. It has a structured, process-driven approach to how it is organized, which reduces confusion and maximizes user productivity.
