Development and use by third parties Numerous third parties, including competing products, have also developed or used their own AutoCAD extensions. They have included the following: Adobe Systems Inc. Dreamweaver Automation Visual LISP and Visual C (a version of Visual LISP that was preloaded into the older versions of AutoCAD LT) has allowed programmers to create their own AutoCAD extensions. A number of extensions are widely used and are available for purchase on the Autodesk Exchange. The AcuMod (Advanced Customization Modules) feature is another well-known AutoCAD extension. It provides a set of tools for rapid customization of standard, geometric and text objects. Visual Basic is also supported through the ObjectARX plugin. Creation of Custom AutoCAD Forms In 2004, a project named MFCAD was initiated by Sparx Systems to "bring a more powerful, extensible, object-oriented, and component-based user interface to AutoCAD." The project's goal is to create a new user interface for AutoCAD that is based on Visual Component Library (VCL), and has the ability to produce all AutoCAD graphical objects from C++ code. In June 2007, Sparx Systems released version 1.0 of the MFCAD interface. In the January 29, 2010, issue of Microsoft AutoCAD, AutoCAD announced an "Enhanced User Interface" (EUI) feature, which "aims to provide an intelligent interface that makes programming more intuitive." The new UI provides access to "the core AutoCAD components and core tools." In August 2011, Sparx Systems released the New UI project, which is based on the MFCAD 1.0 GUI. In the January 29, 2012, issue of Microsoft AutoCAD, AutoCAD announced a user interface rework "to make it easier to use and more productive." The new UI uses "a new Windows Presentation Foundation (WPF) and Microsoft Silverlight-based design and programming environment and tools for creating AutoCAD user interfaces." In June 2012, Microsoft released AutoCAD 2011 R3. The new release includes "rebuilt user interface, updated language support, and a new feature set." In August 2012, Sparx Systems released version 1.1 of the New UI project. The version 1.1 GUI also af5dca3d97

What's New In?

Command Display Hierarchy: Edit or display the entire set of functions available on a tool, for improved clarity in your designs. New options let you easily select a desired part of the tool's set of functions. (video: 1:48 min.) Symbol Draw: Let the system do the drawing for you. The Symbol Draw feature makes it easy to create editable symbols for objects or arrows or other symbols you've used in the past, to more efficiently use your screen space. (video: 1:25 min.) Link to other DWF files and edit files: Use multiple files from a variety of file types to more efficiently use DWG and DWF file space. Import a file from other file types (PDF, Postscript, JPEG, etc.) and let the software automatically link it to your drawing. Then you can edit and comment on the linked file just like you would in a DWG file. (video: 1:15 min.) In addition to these new features, AutoCAD also provides several performance enhancements, such as: Automatic Chart Performance Enhancement: Make your AutoCAD drawings faster to render by using the new Dynamic Charts feature. This feature automatically adjusts the number of charts to improve drawing speed. For example, if you have a large number of lines in a drawing, AutoCAD automatically increases the number of charts until it has enough to handle all the lines. When the new Dynamic Charts feature is available, no additional actions are required to get the best performance. You can still use Dynamic Charts, if you prefer, by selecting Auto-compensate for Dynamic Charts. You can select the automatic compensation option or the user-defined compensation option. With the user-defined compensation, you can specify the number of charts that AutoCAD will use for a drawing. For example, if you specify that AutoCAD use only three charts for a drawing, the new Dynamic Charts feature automatically increases the number of charts until it has enough to handle all the lines in the drawing. When you select Auto-compensate for Dynamic Charts, the user-defined value overrides the automatic value, and you can specify the number of charts that AutoCAD will use. With the automatic compensation, you can specify the number of charts that AutoCAD will use for a drawing. AutoCAD will automatically compensate for Dynamic Charts
