An investigation of the effects of combined naloxone-methyldopa treatment on circadian rhythms of activity and autonomic and hormonal functions in the rat. 1. The aims of the study were to investigate the effects of a 3 week treatment with simultaneous naloxone hydrochloride (Nal) and methyldopa (Mdopa) on circadian rhythms of activity in unrestrained rats and to follow its effects on autonomic and hormonal functions. 2. Mice were implanted with a subcutaneous insulin pellet. Animals were kept in metabolic cages (Tecniplast, Italy) for at least 10 days in a 12 h:12 h light:dark cycle. 3. Periodogram and cosinor analysis of the activity rhythm in animals treated with saline showed a clear nocturnal peak associated with the locomotor activity. Treatment with Nal and Mdopa caused a disappearance of the peak; in these animals daytime activity was not changed, but nocturnal activity was lower than in control animals. The sleep time remained the same as in control animals. The sleep time remained the same as in control animals activity and in control animals. The circadian pattern of heart rate in the evening. No diurnal variations were evident in plasma cortisol levels. 6. The results indicate that the treatment with Nal and Mdopa depressed circadian
