Field of the Invention This invention relates to a contact apparatus that is suitable for an electronic component and a method of manufacturing the contact apparatus. 2. Description of the Related Art To meet the demand for compact and lightweight equipment, electronic equipment has been designed to be more compact and lighter. Accordingly, there is a need for electronic components to be as compact and lightweight as possible, thereby enabling the entire electronic equipment to be more compact and lightweight. As one approach for reducing the size of electronic equipment, technology has been developed that integrates various electronic components to make the entire assembly compact and light. For example, a first electronic component (the power supply) and a second electronic component (the display) are mounted in a first substrate and a second substrate, respectively, and the first electronic component is connected to the second electronic component. Referring to FIG. 7, various electronic components are mounted in a first substrate 51 and a second substrate 52 by soldering. Referring to FIG. 7, the first substrate 51 is illustrated as a circuit board and the electronic component on the first substrate 51 is illustrated as an electronic component 55. The first substrate 51 is connected to the second substrate 52 by soldering. Referring to FIG. 7, electronic components 54 to 58 are mounted on the first substrate 51. The electronic components 54 to 58 include a power supply 56, a display 57, a microphone 58, and an electronic component 59. The power supply 56 is connected to the power supply pattern (not illustrated) of the first substrate 51 and the second substrate 52 by soldering. The display 57 is connected to the display pattern (not illustrated) of the first substrate 51 and the second substrate 52 by soldering. The microphone 58 is connected to the microphone pattern (not illustrated) of the first substrate 51 and the second substrate 52 by soldering. The electronic component 59 is electrically connected to the power supply 56 and the display 57. Accordingly, the electronic component 55 on the first substrate 51 and the electronic component 57 on the second substrate 52 are electrically connected to each other. The electronic component 59 is electrically connected to the electronic component 55 and the electronic component 57 on the first substrate 51 and the second substrate 52. The power supply 56 on the first substrate 51 and 6d1f23a050
