
How Hackers Hack Facebook With Kali Linux And SET(Social Engineering Toolkit)

We will be using the following tool to perform our social engineering attack, to hack Facebook and to execute some commands. The program is SET. It is a sophisticated social engineering toolkit. This program also allows us to perform malicious and social engineering attacks on the victims systems. There are few things that you should need and do before performing this attack: First of all, you will need a firewalls and a proxy server. The proxy server will have access to the whole Internet and you will be able to connect to any external services you will like (Facebook, Twitter, etc.). You need a Facebook credentials to begin with. You can find this on hackers forum or they can be retrieved from breach databases like Have I Been Pwned.

Attack vectors against Facebook are well documented and results of the attacks are not uncommon. Users often fall victim to the phishing scams that are like a mutant offspring of the classic old school email used to infect users with the trojan and banking trojans back in the days, also cyber criminals are always looking for clever new ways to exploit social networking sites. The same way hackers use email for spreading their evil and malware, are currently using Facebook, Twitter and other social networks to take advantage of users.

The attackers trick victims into clicking on links that appear to be coming from their colleague or from a website that is valid. The link contains special code which is the malware or the hackers and the malware will perform to achieve his objectives. In this tutorial we will learn how hackers hack Facebook with Kali Linux and SET(Social Engineering Toolkit).

How Hackers Hack Facebook With Kali Linux And SET(Social Engineering Toolkit)

Second How hackers hack Facebook with Kali Linux and SET(Social Engineering Toolkit), If user have

access to their local network, then they can install and setup SET proxy server on their local network and capture user's request on his local network instead of redirecting the request on remote network. and this is not possible in an public network (Internet). Third How hackers hack Facebook with Kali Linux and SET(Social Engineering Toolkit), the SET setup will work as proxy server on the remote network. but only on the local network we will not have access to our remote network through local network. So that's all there is to hacking Facebook with this attack vector, using the Social Engineering

Toolkit we can create a website that is essentially a phishing attack. In the next screen you can see the details of the fake website that we have created and what is occurring when we visit the website. There's one more dimension to social engineering that lets the cyberthief reset the password, even if it is hashed and salted.

Because we are talking about a form of hijacking, there is no reason to ask for a password that is hashed, only a salted hash of a password. If there's a reason you're asking for a password that the user should know—like for one of their colleagues—then they can use that reason and reset the account

password on their own, without Facebook's intervention. Most organizations are using social media to promote themselves. They are trying to gain trust by building relationship with their followers. It's all about building relationships. We can easily abuse those relationships which we built with our followers by sending them links to phishing pages. Hackers can easily control and take over those websites with our access. Once they gain access, we control the site. We can control it with our webpage editor. We can change posts, like or unlike pages, add photos, and even delete posts. Once they gain access, they can

control the site. A website is a web page built with HTML and other scripting languages that a person can access through an Internet browser. Hackers can easily gain access to any website by using a password reset system. A password reset system allows an individual to change their password to gain access to the website. 5ec8ef588b
