Mutoh Sc 650 Drivers Download

i got back the manual from the mutoh dealer/repair facility and put in the code from the black box and tried to start up the printer. i got a few messages like the printer is already printing, something about the detachable software, and then the message "error in software" came up and the printer stopped printing. i then unplugged the printer and tried to install the software again, by going to the mutoh website and downloading the software. i put in the code from the black box again and tried to install the software, but it seems like the serial number i gave to mutoh wasnt accepted. i recieved an automated error, so i started to uninstall the mutoh software and get the error/error message again. aaaarghmemyline - just received a mutoh sc 650. how is it compatible with windows xp pro and vista? will it work on those operating systems? if so, how do i do it? i dont have any software or discs, but if possible, that would be great. i know little about this printer, but have the same question. i am a middleman for a company and have one of these on the market. they are supposed to be compatible with many, or can i assume that they are not compatible at all? your experience is not common. i am new to mutoh. i have a m660 and a m650. both appear to operate well in a variety of applications. i use a hp dye printers with 5 different color inks for wide format printing. i dont know what the output color gamut of the mutoh is, but you should find a print specification document on the mutoh site. that will allow you to see if the printer really will work for you.
