ABOVE: Open a vector toolbar, then right-click on the image. The options you see will apply to all images in the document. **BELOW:** A complete list of CSS styles applied to an image with the image editor. But you can get around these limitations, and still use this option to build a slideshow, if you want. Open the Options dialog for the presentation, then switch the “Show in Slideshow” option to “on.” The changes will then be applied to every image. You’ll need to resize the images yourself, because Photoshop will ignore your options in Dreamweaver or Photoshop. **ABOVE:** A number of images from the Review series in my Flickr photostream. **BELOW:** A shot of a warm orange sunset on a snowy day with my amazing Corvette. Lightroom CC is slower than Lightroom 5, and Lightroom 5 is slower than Lightroom 4. Photoshop is no longer the quickest investment, but it is still a very well-rounded package. I joined this as a beta tester and installed it on a PC with 2 Gb of RAM. After installing and updating, I found it only required a mere 500 Mb of space. Gimme a break. And honestly? The new interface is a little hard to get used to, but once you have, and for the most part, it's not too bad (but I still prefer CS6). I haven't noticed any appreciable speed difference, but if I did, I'd be fine with that. I'm not a fan of the way it works with external sources, and as for the other things you listed? I'm far less convinced that the new developer tools can't be abused. Even my German friends tell me that they love the new editor, but I haven't changed anything in their way since the Beta-version.
