However, there are other minor changes. Some of these are even held over from previous versions of Photoshop:

- Lens Correction: The Lens Correction feature is moved to the Basic panel, making it hidden in the view menu. Users can still enable it in the Lens Correction dialog. This is a minor change, and it appears to have been made by mistake. Some users prefer this feature over the new Content Aware feature when using Wide Area Tiles for scaling.
- A new tagging feature, Content-Aware Move, is also introduced. This tool automatically tags part of the image and uses the most similar area in its replacement area to determine color, detail, and structure.

Since CS3, Adobe has made major strides in improving the workflow between a photo editor and a customer, including more tools for social media and online sharing. In CS4, Photoshop features a new user interface, brush improvements, new layer and frame-related improvements, a variety of selection tools and even an advanced new interactive feature, Snap. But even with these new features, there are still a few minor changes that probably won't be obvious in the video until the final version of CS5 is released. Adobe has given the CS5 user interface a major overhaul, with new workspace areas, including Windows 7-style tabs that flank the tool palettes in the image: one area for simply editing the canvas, and another for working with selections and layer styles. Adobe's single most important new feature is the Content Aware Scaling feature in the Adjustment Layers panel. This system-wide Content Aware feature intelligently alters the content and size of an image in such a way as to maintain the visual integrity of an image while mantaining image quality.
