To limit the number of rows and columns, the Enter key can be used. Other alternatives include entering the value manually or by dragging it from the cell's formula bar. If this is not feasible, users can also set a field of destination cells by defining the path using the keyboard. The keyboard shortcuts are as follows:

EXPRESSION Filter Description: If you want to
create a filter based on a string, enter it in the
search box or open the Expression editor. The
latter is a dialog box that opens 2edc1e01e8

Save Excel's bulky worksheets and clean out the blanks and zero's with this small, easy to use utility. In addition to this, Excel Utility can remove strings defined by the user in a friendly and comfortable manner. As opposed to most Excel assistants, this one does not come in the form of an add-in, but in a standalone form. However, Excel is still a prerequisite without which the application cannot run. Excel Utility is able to process individual files exclusively, as batch conversion is not supported just yet. On the bright side, the support for input files is extra rich and includes XLS, XLSX, XLXB, XLAM, XLA, XLT, XLM and XLW. As soon as you've chosen the file to be processed, the program automatically opens Excel so you can view its contents. The next step should be a quick look inside the Configuration menu, where you can customize the search options in accordance with your needs. As such, you can opt to clean the file of empty cells and / or

zeros or to create your own filter, which can be a string or an expression. Also from this section, it is possible to set a limit on the maximum number of rows and columns to be processed. Up next, you can start the search process, which will result in a list of all the rows that match the previously set criteria. Simply select the ones you need removed and save the document after the process has been completed. In conclusion, Excel Utility can become a real helper for users who deal with large Excel files that have bad formatting. The cleanup process takes very little time compared to the amount of time you'd be spending to manually perform this operation. Please Note: Excel Utility will close itself as soon as you use the File menu to save the document. Therefore, don't forget to close the program or it will not be available anymore after the process has been completed. If you encounter any problems while using the program, please report them to us in the comments section below. In addition, we will notify you when the problem is solved.
