CacheCopy Portable Crack + For Windows

cacheCopy Portable is a small, lightweight utility that can rip images from various browser cache and save them to a folder. The tool may come in handy for users who come across various images on the web, but let's say, they forget to save them immediately. Most modern browsers save images and other associated files in the cache to speed the loading times, in the eventuality that users decide to visit those particular websites again. The application is designed to go through the cache and rip all images. However, it is important to note that the program solely has this role and that users still need to go through the images manually in order to find a specific image. Nevertheless, the tool can save a lot of time and energy, as otherwise users will be forced to find out where their default browser saves these images. The tool works with most modern browsers, although by default it displays just Chrome and Internet Explorer. In case of other browsers than the aforementiQ: Strange behavior of System.currentTimeMillis() when there is no network I have a problem with System.currentTimeMillis(). I am reading from a sensor every 3 seconds which means I get an integer every 3 seconds. When there is no connection to the internet (the user uses the app in the background without any network), I get every 3 seconds the same value. For example, if I get the value 3378 (seconds), then 3378, 7839 (seconds), and then 7839, this value is the same every time it occurs. It is a very strange behavior and I have no idea why it occurs. The code is the following: long lastTime = 0; int interval = 60; public void getPeriod(long lastTime) { this.lastTime = lastTime; } public void update(long lastTime) { lastTime += interval; timer.cancel(); timer = new Timer(); timer.schedule(new update(this), lastTime, interval); } public void run() { while(true) { if(lastTime > System.currentTimeMillis()) { //all work
