Cracking Adobe Photoshop is not as straightforward as installing it. It requires a few steps to bypass the security measures that are in place. First, you must obtain a cracked version of the software from a trusted source. Once you have downloaded the cracked version, you must disable all security measures, such as antivirus and firewall protection. After this, you must open the crack file and follow the instructions on how to patch the software. Once the patching process is complete, the software is cracked and ready to use.

You can also lock Libraries to prevent other people in your company from accidentally overwriting them. That's a tradeoff, I suppose. I do not know think that you can apply Library protection to individual images, so that might be a problem if you keep those files in a public Dropbox folder. In any case, Photoshop is still a top-notch content creation tool and it is still faster than virtually any competitor. The only areas where it is lacking are raw file editing and image editing plugins. The rest of Photoshop to me is a useful tool to create properly-formatted files on your own or to extend and optimize someone else's work. I believe that the company is aware of the limitations of its Photoshop application and is working on it. I expect that most of these gaps will be fixed with CS6. **Update:** I may have mentioned this in the review, but I thought I would mention it now. There is no longer the library option in Photoshop CS6. There is an internal database that that does both taxonomy and version history. I can't tell you much more about that. If you use a library, you can do it with Photoshop CS6. Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4. Working on a project with 1500 D800 NEFs my impression is that the smart previews increase speed while working in the Developer mode - in Lib. mode however everything slows because the JPEG previews are used. So far I am not sure how the Jpegs are used as previews when you have the smart previews (DNGs) available. But have to say that I am happy with 5.2 RC although I will say bye-bye to LR the day they make it part of CC.  
Regards! Sren
