Adobe has also continued to work on color theory, and as you may have noticed, the tool's high pass mask included an advanced color-grading tool similar to that from the popular photo editor GIMP. In any case, the new details in software may not make a major impact today, but the color tools that Adobe has introduced definitely count for a lot and are important to know about. Adobe has also tweaked the way it processes images by applying levels to color channels, texture and exposure. The new Radial Filter tool makes it easy to feather, soften, blur and filter images. In Photoshop, the Lightroom plugin is great. The update breaks its compatibility with earlier slideshows created with the previous version, so you might want to be careful which versions of Photoshop CS5 you use when creating new custom Lightroom slideshows. Barbed technical reviews usually come with a disclaimer, so here goes: I don't know how to actually use Lightroom 4, well, to be more exact, how it compares to the Classic version. I also can't test Shadow/Highlights with any depth, as I have chosen not yet to use any tools that would effect the exposure individually, but I am experiencing issues with Unsharp Mask that may be due to a radio issue on my machine. I strongly believe that my software needs a little more tweaking, but that's just an opposite opinion. In any case, I am generally impressed by the user experience of Lightroom. While the interface is a little clunky, the user manual comes to the rescue, and you can read it even if you have to pull out your hair. Software created by Adobe is usually much better than what I can do by myself, so I am doubly grateful for the easy to sit on the couch and not sweat about composing the perfect image. Adobe has also done a good job with presets, and Lightroom now has the most impressive library of image modes and file types of any application.
