Memory Layers get their own window that you can turn on and off or rename, making it easier to see and access all of your layers. You can also clone layers using the "Copy As New Layer" command from Edit > Select Layer by Clicking, and now there's a new Animation Commands panel that lets you pick and choose which animation presets to apply to your layer, as well as create and apply your own custom presets. In the Library module, you can now navigate with a unique navigation bar that lets you select images from a computer or the web. This bar also works with the web version of Photoshop, giving you a handy shortcut to quickly move between documents on the web.
