The File Browser panel is now a card-based, nonlinear view of your library that uses the same layout as the "Actions panel" in Lightroom 5. If you're familiar with Photoshop actions, or any other menu panel, you'll feel right at home here, and you'll find that there are a lot of things you've got to organize and organize them if you want to find them quickly. The Photoshop interface is now much more comfortable for Mac users. The command buttons in the Tools panel are now sub menus and the entire interface has been vastly improved. Namely, the Windows and Mac menus are now more or less integrated. Many of the most important Photoshop values are now available in the Mac menu, and in an external dictionary file. Get them from the menu! Fireworks Baking is bread and butter for Lightroom and Photoshop. It is now baked right in Photoshop CS6. No need to export your PSD and then bake it back in! However, you can still bring that file into Photoshop and make minor adjustments with the Baking sliders. One of the most dramatic changes is the update to the Import dialog. While the Import dialog has always been a total mess (I'm not talking about Print Importer), Photoshop CS6 has put a lot of new features to use here. You can now import images from your hard drive, a CD, a network drive, a web address, Capture One's C1D plugin, etc. If you have a Camera RAW plugin installed, you can also import images by clicking on a thumbnail in the Lightroom image panel and choosing Open in Photoshop. While this sounds great, this dialog only works if you're using Firework's Fireworks Baking.
